

RAIN GARDEN DESIGN WORKSHOP

Promoting Awareness of Stormwater Pollution

Saturday, February 11 9:00am–4:00pm

Museum of Life and Science

433 Murray Avenue Durham www.ncmls.org

Rain gardens absorb stormwater by allowing it to naturally seep back into the ground. Join your fellow educators at the Museum of Life and Science to discover how to landscape your schoolyard with native plants that filter stormwater from impervious surfaces. Learn techniques to teach water-quality issues such as stormwater, polluted runoff, sedimentation and nitrification.

For information and pre-registration:

Brad Herring (919) 220-5429 x360

bradh@ncmls.org

A Certificate of Completion will be awarded to request license renewal credit upon completion of the workshop. Space is limited to 20 participants.
