

We've never been "just kits."

Hands-on learning is more than playing with science equipment.

When students are fully engaged in a task, they are actively doing, actively thinking, and actively discussing. While hands are engaged, minds are questioning, sorting through input, and making connections. All of our programs – from 1-2 day kits to full-year curricula – are lessons, materials, and teacher supports designed to engage both the hands *and* minds of students.
